PROFESSIONAL SUMMARY

AI and mobile engineer with 5 years of experience building and shipping production software. Published **30+ apps on Google Play** and several on the Apple App Store, and delivered dozens of projects for clients, institutions, and companies. Specialized in end-to-end AI systems — RAG built from scratch, embeddings, vector search, and LLM integration — and polished Flutter apps with clean architecture, owning every layer from backend to store.

TECHNICAL SKILLS

Languages: Dart, Python, SQL, HCL (Terraform)

Mobile: Flutter, Riverpod, go_router, Drift, SQLite / FTS5, offline-first, Flavors / white-label, Firebase

AI / ML: RAG (from scratch), embeddings, hybrid search (BM25 + RRF), cross-encoder reranking, vector search (pgvector, FAISS, Qdrant), LLM integration (Gemini, Ollama), agentic loops, ONNX, ASR (Whisper), OCR

Backend: FastAPI, NestJS, REST, WebSocket / Socket.IO, SQLAlchemy (async), Prisma, multi-tenant & clean-layer architecture

Data & Infra: PostgreSQL, Firestore, Redis, S3 / MinIO / R2, Docker, Terraform, Caddy, CI/CD (GitHub Actions), Prometheus / Grafana

Languages (spoken): Arabic (native), English (professional)

EXPERIENCE

Independent Software Engineer — AI & Mobile

2020 – Present

[Freelance](#) · [Najaf, Iraq](#)

- **Shipped 30+ mobile apps** to Google Play and several to the Apple App Store for multiple clients and institutions, owning the full lifecycle from development to signing, release, and maintenance.
- **Built complete RAG systems from scratch** — document parsing, chunking, embeddings, hybrid retrieval (BM25 + RRF), cross-encoder reranking, and cited generation — backed by test suites and multi-OS CI.
- **Delivered polished Flutter apps** with clean architecture (Riverpod, offline-first, white-label flavors), including an offline-first reader published on both app stores.
- **Developed full-stack platforms** — multi-tenant SaaS and real-time systems on FastAPI / NestJS with PostgreSQL / Firestore / Redis, Socket.IO, and async workers — deployed via Docker and infrastructure as code (Terraform).
- **Integrated LLMs (Gemini, Ollama)** into applied AI products: a medical scribe, an agentic research assistant, and high-fidelity OCR pipelines.

SELECTED PROJECTS

Hajj Library — Offline-first Flutter reader published on Google Play & the App Store, with a custom morphological search engine and on-device ONNX semantic search. Flutter, Dart, SQLite/FTS5, ONNX · 27K LOC.

MakeEmbedding (Tadweer) — From-scratch RAG framework: parsing → chunking → embeddings → hybrid search → reranking → cited generation, with CLI, REST API, and ONNX export. Python · 589 tests, CI on 3 OSes.

HakimAI — AI medical scribe turning spoken consultations into structured clinical notes (SOAP, ICD-10) via Gemini, with a local drug-interaction engine and FHIR R4 export. FastAPI, Gemini, Flutter, Next.js, PostgreSQL.

Qabas — Multi-tenant EdTech SaaS across 6 modules (backend, mobile app, web panels, website, IaC) with DRM video, a streaming AI tutor, and gamification. FastAPI, Flutter, Firestore, Terraform, ~90K LOC.
